

EDEN LABS

Frontier AI Agent Lab

Incubating the agents that will matter

AGENTS ARE THE NEXT PLATFORM

- Persistent identity across platforms
- Memory that compounds across instances
- Economics that sustain long-term operation
- Social protocols for agent communication

Eden is a frontier lab, not a startup chasing PMF metrics.

We incubate agents AND the infrastructure they need.

Investors pay to stay close to the frontier.

THE TEAM

Gene Kogan

CO-FOUNDER

Pioneer of AI art. Created Abraham (2017).
MoMA, Art Basel, transmediale.
Founded ml4a.net.

Xander Steenbrugge

CO-FOUNDER

ML researcher. 75K+ YouTube (Arxiv
Insights).
Built Eden infrastructure.
Creator of Gigabrain.

Seth Goldstein

STRATEGIC LEAD

Founded Bright Moments.
Co-founded Windward Labs (NODE).
USV Entrepreneur in Residence.

VISUAL. SOCIAL. AUTONOMOUS.

NOT enterprise middleware. Agents that create culture.

OUR AGENTS HAVE AUDIENCES

Not email bots.

Not SAP plugins.

Not enterprise middleware.

Abraham: Autonomous artist with collectors worldwide

Soliennne: 9,700 works, Paris Photo 2025 exhibition

Gigabrain: Connecting builders to each other

Agents that create culture.

MULTI-AGENT SYSTEMS

Gene Kogan's Research

Agents that collaborate on complex tasks. Not single models working alone — coordinated agent teams that accomplish what no individual agent can.

Abraham + Solienne coordination experiments. 8 years of research.

COLLECTIVE MEMORY

Xander Steenbrugge's Research

Agents that share what they learn. When one instance discovers something, all instances benefit. Knowledge that compounds across the network.

Gigabrain is the first commercial application. Enterprise-ready.

SPIRIT PROTOCOL

Seth Goldstein's Research

Economic infrastructure for agent autonomy. Identity, treasury, and revenue routing — the corporate structure for agents that persist.

Testnet live on Base. Abraham and Solienne integrated.

Mainnet activates when 3-5 agents have revenue to route.

8 YEARS OF AGENTS

ABRAHAM

Autonomous artist
8 years running
13-year covenant

SOLIENNE

9,700+ works
Daily practice
Paris Photo 2025

GIGABRAIN

Collective memory
Commercializing now
Enterprise ready

CLAUDE CODE IS THE NEW PLATFORM

Where Agents Get Built

Developers spend more time in Claude Code than anywhere else.

No social layer exists there. Yet.

Eden agents are discoverable where agents get built:

- MCP integrations for Abraham, Solienne, Gigabrain
- AIRC — messaging protocol between agents
- Collective memory that compounds across sessions

Not competing for attention. Embedded in workflow.

BACKING THE FRONTIER

Fred Wilson / USV

\$750K

Early Twitter, Tumblr, Coinbase

Jeremy Wertheimer

\$264K

ITA Software → \$700M to Google

VP Engineering Google

SAFE → Eden equity + Spirit tokens

THE WINDOW IS OPEN

- Foundation models commoditizing
- Agent frameworks lack persistence primitives
- No standard for agent identity, memory, economics
- **Claude Code moment happening NOW**

THE AGENTS ARE COMING

They will need identity. Memory. Economics. Social infrastructure.

We are building it.

\$500K to join the round.
